KEY ISSUES IN OBESITY PERI-OPERATIVE CARE

Session leads: Mike Margaron

Location: Victoria Suite

VIEW DESCRIPTION -

Endorsed by ESA (European Society of Anaesthesiology)

Course Directors: Mike Margaron (UK) Jon Cousins (UK)

Faculty: Chris Bouch (UK) Günther Frank (Austria) Jan Mulier (Belgium) Jon Redman (UK) Daniela Godoroja (Romania) Naveen Eipe (Canada) Euan Shearer (UK) Nick Barron (UK) Faruq Badouiddin (Dubai) Andrew McKechnie (UK)

Course Overview And Target Audience

This course will be delivered by experts in bariatric anaesthesia to provide an update of the key issues in the peri-operative management of the morbidly obese patient.

It will address the major co-morbidities affecting this population, including the impact of the metabolic syndrome and the latest understanding of sleep apnoea and its relevance and impact on the peri-operative course. It will discuss cardiovascular and respiratory pathophysiology relevant to the morbidly obese then cover the fundamentals of drug dosing, airway challenges and finish by updating on current best practices in analgesia, nausea prevention, thromboprophylaxis and post-operative levels of care.

The course is based on the Bariatric Anaesthesia Revalidation course recognized by the UK Royal College of Anaesthetists and by the UK Society for Obesity and Bariatric Anaesthesia, as the knowledge base for certification in Bariatric Anaesthesia.

The target audience will be consultants and senior trainees who work with morbidly obese patients.

Most sessions will be applicable to all surgeons and clinicians involved in pre-operative work up of patients undergoing bariatric surgery, the sessions either side of lunch will be more focussed at those delivering anaesthesia and intra-operative care.

Discussions will be interactive to address practical questions.

The day will consist of five hours of lectures and one hour of questions, discussion and pro-con interactive feedback.

Course Objectives

Upon completion of this activity, participants should be able to:

Describe the key pathological processes associated with significant obesity and understand the relevance of these conditions to the peri-operative course of patients undergoing bariatric surgery. Specifically they should recognize the impact of the pattern of fat distribution and the presence of the metabolic syndrome as major risk factors for peri-operative morbidity.

Describe the screening, investigation and management of sleep apnoea and other obesity-related cardio-respiratory diseases.

Describe principles of drug dosing regimens and understand body weight scalars used in obese patients. Know the benefits and contraindications of multi-modal analgesia adjuncts and enhanced recovery strategies. Know the most appropriate anaesthetic agents and techniques to use in these patients

Recognize the high-risk patient and appropriately stratify resources.

Recognize the patient at high risk of thrombo-embolic events and be able to

balance the risks and benefits of management strategies.

Recognize and describe airway assessment and management strategies in the morbidly obese.

This course introduces and includes aspects of the advanced discussions around sleep apnoea, analgesic regimens and enhanced recovery, which will follow on the afternoon of the next day.
