## STATEMENT OF NEED AND TARGET AUDIENCE

Educational opportunities that promote evidence-based interventions for cognitive rehabilitation are needed by clinicians in order to provide optimum care for individuals with brain injury.

ACRM Cognitive Rehabilitation Training provides such an opportunity by presenting evidence-based standards and guidelines for clinical practice and translating them into step-by-step procedures for use by clinicians. The interventions described can be readily used by occupational therapists, speech and language therapists, psychologists, and other rehabilitation professionals.

### Learning Objectives

To support the attainment of knowledge, competence, and performance, the learner should be able to achieve the following objectives:

1. Use a decision-tree to assist in determining which type of cognitive rehabilitation to implement.
2. Describe techniques for improving attention and the steps involved in carrying out treatments.
3. Identify the general guidelines for the use of external memory strategies.
4. Describe a general algorithm and conceptual framework for structuring interventions for awareness, executive functioning and behavioral / emotional self-regulation.
5. Discuss the evidence concerning the effectiveness of cognitive rehabilitation in the selection and implementation of specific, individualized interventions for cognitive disability.

## HOW TO RECEIVE CME/CEU CREDIT

After participating in Conference CE activities, attendees can submit activity evaluation forms and download CE certificates online. **Certificates will be awarded to those participants who attend the training and complete an online evaluation within 30 days of completing the training.**

Go to [ACRM.cds.pesgce.com](http://ACRM.cds.pesgce.com) (<http://ACRM.cds.pesgce.com>) to complete evaluations and print certificates.

PESG will also make available a General Participation Certificate to all other attendees completing the program evaluation.
